

- 1 Select well-draining site that will receive roughly 6 hours of sunlight each day.
- 2 Pull all weeds from the area about 2 weeks before planting.
- 3 Break up the top 2 inches of soil with a hoe and water the area well, allowing remaining weed seeds to germinate and be removed.
- 4 Sprinkle the seeds on the soil surface, following the recommended distance as outlined on the seed packet of the specific flower species.
- 5 Lay a flat board on top of the new seedbed and press down to ensure contact with soil, then remove the board.
- 6 Gently mist the seedbed with water.

Germination time: 7-14 days.

6 Hours Daily
